

# John Opsatnic — VP, EPC Project Development

One senior hire to convert a national, executive-level relationship network into EPC awards for the consolidated CVR + HWC offering.

## WHY THIS ROLE, NOW

**The model pays CVR twice.** Every EPC dollar won returns ~12.5% to CVR — 8% pull-through engineering plus 4.6% captured material margin. At a \$150M/yr run-rate that is ~\$18.8M of managed revenue and ~\$7.6M of operating income.

**The ladder is relationship-limited, not capability-limited.** CVR and HWC can engineer, procure, and build the work today. Winning it is the gate — and the accounts below are already warm.

**Project development, not sales.** The title matches the job: qualifying pursuits, shaping programs with owners, and carrying them to award — accountable for booked EPC wins.

## THE TARGET ACCOUNTS — WHERE JOHN'S NETWORK LANDS

| Account                       | Capital program                                          | Relationship & entry                                                                                                                  |
|-------------------------------|----------------------------------------------------------|---------------------------------------------------------------------------------------------------------------------------------------|
| <b>AEP</b>                    | ~\$78B 5-yr plan (raised May-26)                         | Long-standing relationship — John and Jim — directly with AEP's EPC group.                                                            |
| <b>Duke Energy</b>            | \$103B 5-yr — largest regulated-utility plan in the U.S. | Strong relationship with the Director of Transmission Asset Management and procurement. John led the recent EOC 5-year pursuit / MSA. |
| <b>Southern Company</b>       | \$81B 5-yr plan (raised Feb-26)                          | John and Jim both carry long delivery history with Alabama Power and Georgia Power.                                                   |
| <b>PG&amp;E</b>               | \$73B 2026–30 plan                                       | VP-level relationships. Pursue pure engineering or EPCM / engineering mix — no short-term self-perform construction exposure.         |
| <b>Xcel Energy</b>            | \$70B+ through 2030 (raised Jul-26)                      | Xcel's VP of Procurement delivered EPC alongside Jim at Arcadis and knows John and Jim well.                                          |
| <b>Dominion Energy</b>        | \$65B 2026–30 — 45% transmission & distribution          | Deep working ties across Dominion's transmission PM organization.                                                                     |
| <b>NextEra / FPL</b>          | FPL \$12–13B capex in 2026 alone                         | John lives a mile from NextEra HQ — deep, local, executive relationships.                                                             |
| <b>Arizona Public Service</b> | \$10B+ 2025–28; \$6B transmission through 2035           | Key Director-level relationships.                                                                                                     |
| <b>Santee Cooper</b>          | State-owned; major generation + transmission build ahead | Scott Smith (ex-AEP) is a board advisor — a 30+ year friendship with John.                                                            |

≈\$475B in disclosed capital programs across these nine accounts (FPL counted at 2026 capex only). Sources: latest company capital-plan disclosures, Q4-2025 – Q2-2026 earnings and filings.

**The ask: approve the hire at ~\$400K/yr all-in (base + incentive + travel).** One mid-size EPC award (~\$3.45M) returns ~\$0.43M to CVR — the role pays back in year one. Full economics: CVR\_Model\_Phase2\_Forecast.xlsx, 'EPC At-Scale Model' tab.
